Adding Liquid to Custom Blocks

```
// define merge fields
var mergeFields = new Dictionary<string, object>();
mergeFields.Add( "Campuses", CampusCache.All() );

string content = @ " <ul>
                        {% for campus in Campuses %}
                            <li> {{ campus.Name }} </li>
                        {% endfor %}
                    </ul> ";

lContent.Text = content.ResolveMergeFields(mergeFields);
```
